

Configure Wifi Card in FreeBSD with Static IP

Monday, 22 June 2015

Last Updated Monday, 22 June 2015

In order to configure your wifi card with a static IP add the following lines to `/etc/rc.conf`:

```
/etc/rc.confwlan_ath0="wlan0"
```

```
ifconfig_wlan0="WPA inet 192.168.1.10 netmask 0xfffff00"
```

```
defaultrouter="192.168.1.1"
```

Also don't forget to add your dns server in `/etc/resolv.conf` file.
