

HTML Tips

This section contain HTML Tips.

Tip 1. Howto redirect a page to another webpage/website

Changing 'content' value to 5 will delay redirection with 5 seconds.
If you se time delay redirection is a good idea to put a message in tags
announcing your redirection in 5 seconds (or whatever time period you want).
<html>

```
<head>
```

```
<meta http-equiv="REFRESH" content="0; URL=http://www.example.com">
```

```
</head>
```

```
</html>
```
