

IMAP Server Test

To quickly test an imap server using telnet use:

```
telnet server 143
01 LOGIN username password
02 LIST "" *
03 SELECT mailbox
```

Line 02 shows you all available mailboxes.

To show the information about a mailbox:

```
04 STATUS mailbox (MESSAGES)
```

Between () you can place one or more of the following: MESSAGES, UNSEEN, RECENT UIDNEXT UIDVALIDITY

And one of the following commands to view the a message 1 is the first message * is wildcard for all:

```
05 FETCH 1 ALL      # All IMAP headers
05 FETCH 1 FULL    # Full headers and body info
05 FETCH 1 BODY    # Body
05 FETCH 1 ENVELOPE # Envelope
05 FETCH * FULL    # All email
```

To fully retrieve a message use:

```
06 UID fetch 1:1 (UID RFC822.SIZE FLAGS BODY.PEEK[])
```
