

## Write a While loop in Shell Scripting Language

Saturday, 23 January 2010

See next example to learn how to write a while loop in UNIX Shell scripting language: Example of a While loop

```
#!/bin/sh e=0 while [ "$e" -ne 1 ]do    echo "while loop"    e=1    # exit conditiondone
```

Don't forget to define e variable from evaluation section of the while loop, otherwise the script will not run.
