Iterate through a NSMutableArray
Saturday, 05 November 2011

Let's say we want to display all elements of a NSMutable array. Here is the source code example for iterating through a NSMutable array:

main.m // iterate through a NSMutable array#import <Foundation/Foundation.h>

```objc
int main (int argc, const char * argv[])

{

    @autoreleasepool {

        NSLog(@"Display elements of an array");

        NSString *element;

        NSMutableArray *array;

        array = [NSMutableArray arrayWithObjects:@"value1", @"value2", @"value3", nil];

        for (element in array) {

            NSLog(@"%@",element);

        }

    }

    return 0;

}
```
