

Print a BOOL (boolean) value in Cocoa

Sunday, 06 November 2011

Last Updated Sunday, 06 November 2011

To print a boolean value declared with BOOL we use:

```
main.m // print a BOOL (boolean) value#import <Foundation/Foundation.h>
```

```
int main (int argc, const char * argv[])
```

```
{
```

```
    @autoreleasepool {
```

```
        BOOL var1 = YES;
```

```
        BOOL var2 = NO;
```

```
        NSLog(@"var1 = %@",var1?@"YES":@"NO");
```

```
        NSLog(@"var2 = %@",var2?@"YES":@"NO");
```

```
    }
```

```
    return 0;
```

```
}
```
