

Automatic Reference Counting Issue: ARC forbids explicit message send of 'dealloc'

Sunday, 06 November 2011

If you got the following error when compiling a Cocoa Touch / Objective C source code, when using Xcode 4.x:

```
error: Automatic Reference Counting Issue: ARC forbids explicit message send of 'dealloc'
```

you must disable Automatic Reference Counting in order for your code to compile. Or do not use dealloc methods, leave everything to autorelease.

To deactivate Automatic Reference Counting go to Xcode -> Project Target (blue icon on top of your project tree) -> Build Settings and select No for Objective - C Automatic Reference Counting.
