

Resize an OSX Partition From Command Line (Terminal)

Thursday, 17 November 2011

If you want to resize an OSX partition from command line (terminal) here's how to do it:

```
sudo diskutil resizeVolume /dev/disk1s2 100GB
```

Where /dev/disk1s2 is the partition you want to resize.

If you want to see how much can you decrease or increase the partition size run:

```
sudo diskutil resizeVolume /dev/disk1s2 limits
```
