

Xcode Template error when trying to build an iPhone app for iOS 3.1

Saturday, 26 November 2011

If you get the following error:

```
Terminating app due to uncaught exception 'NSInvalidArgumentException', reason: '*** -[UIWindow setRootViewController:]: unrecognized selector sent to instance 0x1185e0'
```

This is because of a bug in XCode project templates that are not compatible with older iOSes (for example with 3.x series or even 4.x).

To fix that replace the following line:

```
self.window.rootViewController = self.viewController;  
with:  
if ([self.window respondsToSelector:@selector(setRootViewController:)])  
    self.window.rootViewController = self.viewController;  
else  
    [self.window addSubview:self.viewController.view];
```

in your ViewController.m file.
