

Create a range of directories in Python

Saturday, 18 February 2012

Last Updated Saturday, 18 February 2012

If you want to create directories from 01 to 12 using python here is a variant to do that:

```
create_dirs.py#!/usr/local/bin/python
```

```
import os
```

```
for i in range(1,13):
```

```
    if len(str(i)) == 1:
```

```
        print 'i = 0%s' % (i)
```

```
        os.mkdir('0%s' % (i))
```

```
    else:
```

```
        print 'i = %s' % (i)
```

```
        os.mkdir('%s' % (i))
```
