

python ImportError: No module named numpy

Thursday, 23 February 2012

Last Updated Thursday, 23 February 2012

If you get the following error when trying to run a Python source code:

```
python ImportError: No module named numpy
```

then your numpy Python module is not installed.

To install numpy in FreeBSD do the following:

```
cd /usr/ports/math/py-numpy  
make install clean
```
