

Use a better terminal on OSX rather than default one

Thursday, 22 March 2012

If you are a sysadmin and you need a better terminal app (better than Terminal) there's a usefull app called iterm2:

It's free. To install it go to: <http://www.iterm2.com/>

It's has more options than OSX's Terminal and you will notice your F-keys will work with Midnight Commander.
