
Show IPs that access your Web server, sorted by number of connections

Tuesday, 17 April 2012

Last Updated Wednesday, 18 April 2012

If we want to see which IPs use our Web server and we want to sort the list ordered by number of connections from every IP, in order to identify IPs that stress our server we can run the following command:

```
netstat -an | grep ".80" | awk '{print $5}' | sed 's/.[^.]*/' | sort | uniq -c | sort -rn
```

or (grep just IPs):

```
netstat -an | grep ".80" | awk '{print $5}' | sed 's/.[^.]*/' | sort | uniq -c | sort -rn | egrep '([[:digit:]]{1,3}\.){3}[[:digit:]]{1,3}'
```
