

Solaris gcc fatal error: stdio.h: No such file or directory

Friday, 08 June 2012

If you get the following error when you try to compile a simple C program under Solaris using gcc:

```
root@solaris:/home/john/learn/cpp/example2# gcc -c firstapp.c
firstapp.c:1:19: fatal error: stdio.h: No such file or directory
```

then the problem is that you do not have installed system headers. In order to install system headers in oracle run from command line:

```
sudo kg install system/header
```
