

Install PHP in Solaris

Monday, 04 March 2013

To install PHP in Solaris using pkg run:

```
pkg search php
```

Then:

```
pkg install php-52
```

If you get an error like this:

```
pkg install: No matching version of web/php-53 can be installed: Reject: pkg://solaris/web/php-53@5.3.14,5.11-0.175.1.0.0.24.0:20120904T174930Z Reason: All versions matching 'require' dependency
```

```
pkg://system/linker@0.5.11,5.11-0.175.1.0.0.23.0 are rejected Reject: pkg://solaris/system/linker@0.5.11,5.11-0.175.1.0.0.24.2:20120919T185204Z Reason: This version is excluded by installed incorporation
```

```
pkg://solaris/consolidation/osnet/osnet-incorporation@0.5.11,5.11-0.175.0.10.1.0.0:20120920T143019Z
```

Then you should try to install other version. For example the error here was for installing php-53 which needed other version of linker.
