

# Managing Packages in Solaris

Monday, 04 March 2013

Last Updated Tuesday, 11 June 2013

This is work in progress...

See from which repository Solaris will install packages:  
pkg publisher

Install a package (next command will install Midnight Commander):  
pkg install mc

See info about a package:  
pkg info -r mc

List packages that need to be updated:  
pkg list -u

Update packages:

```
pkg update
```

or:

```
pkg update --accept
```

After you've updated Solaris packages reboot the system.
