Error Starting Xorg Server After Solaris Update

Last Updated Tuesday, 11 June 2013

If your XOrg server does not start (via GDM) after an Solaris update and reboot then you could generate a new XOrg config file and with that config file replace /etc/X11/xorg.conf file.

Xorg -configure

cp /home/john/xorg.config.new /etc/X11/xorg.conf

Then restart your machine and GDM should start your Xorg server.
